PROFESSIONAL SUMMARY

Software engineer with hands-on Apache Kafka experience building high-throughput event-driven systems, and strong distributed systems fundamentals from production deployments across microservices architectures. Built a Kafka-based ad engine processing 10,000 events per minute at sub-100ms latency, and containerised multi-service systems with Docker. Strong CS background (MSc Computer Science, UCD 2025; BTech 9.2/10) with experience across Python, TypeScript/Java, AWS cloud infrastructure, and PostgreSQL. Portfolio: dhruvabisht.com.

CORE COMPETENCIES

Apache Kafka

Distributed Systems

Python / TypeScript

Docker / Containerisation

AWS Cloud Infrastructure

PostgreSQL

Event-driven Architecture

Microservices

WORK EXPERIENCE

NomadEire Oct 2025 - Present

Software Engineer

- Designed and deployed cloud infrastructure on **AWS** -- selecting services for reliability, fault tolerance, and operational observability at startup scale.
- Built **Node.js/TypeScript** backend services with RESTful APIs, PostgreSQL data layer, and containerised deployment environments.
- Implemented structured logging and monitoring for production system observability as sole engineer owning the entire infrastructure lifecycle.

Advice Bytes May - Aug 2025

AI Developer Intern

- Deployed serverless production system on **AWS Lambda and API Gateway** with IAM role scoping, CloudWatch monitoring, and production alerting.
- Built asynchronous **Python** backend integrating multiple services (Claude API, Supabase, vector database) -- reduced inbound support by 30% in production.

Accenture Oct 2023 - Aug 2024

Packaged App Developer

- Developed enterprise backend services with **Java Spring Boot** in large distributed enterprise environments, gaining exposure to production-grade distributed system patterns.
- Applied Agile practices, code review workflows, and CI/CD pipelines in a team of 20+ engineers.

KEY PROJECTS

Kafka Ad Engine 10K EVENTS/MIN · SUB-100MS

High-throughput event processing system using Apache Kafka -- designed consumer group topology, configured partition count for parallelism, and used offset management for fault-tolerant at-least-once delivery. Processed 10,000 events per minute at sub-100ms end-to-end latency with Elasticsearch indexing.

Stack: Apache Kafka, Python, Elasticsearch, Docker

Sentinel-AI MICROSERVICES · DOCKER COMPOSE

Multi-agent pipeline with each service containerised using Docker Compose, communicating over internal REST APIs. Designed for stateless agents with all state in PostgreSQL for simplified fault recovery and horizontal scaling. Achieved 84% document analysis accuracy.

Stack: Python, FastAPI, Docker, PostgreSQL

Venturella SUB-200MS POSTGRESQL

Full payment platform with sub-200ms PostgreSQL query performance through query plan analysis, index optimisation, and schema design. Demonstrates database performance engineering at the infrastructure layer.

Stack: TypeScript, Node.js, PostgreSQL, Stripe

EDUCATION

MSc Computer Science	2024-2025
University College Dublin (UCD), Ireland	
Grade: 2:1 Distributed Systems, Cloud Computing, Machine Learning	
BTech Computer Science	2019-2023
Graphic Era University, India	
Grade: 9.2/10 (First Class Honours)
