PROFESSIONAL SUMMARY

Genuinely full-stack product engineer who owns things end to end: equally comfortable building a React component, optimising a PostgreSQL query, or challenging a product decision that does not serve users. Built and shipped NomadOps as sole engineer and product owner (TypeScript, React, Node.js, PostgreSQL, AWS), achieved sub-200ms database performance in a production payment platform, and deployed AI-powered customer systems generating 30% measurable business impact. Async-first, remote-ready, and product-driven by default. MSc Computer Science, UCD Dublin 2025. Portfolio: dhruvabisht.com.

CORE COMPETENCIES

React

Node.js / TypeScript

PostgreSQL / Data Modeling

Full-Stack Ownership

Clean Architecture

AWS Cloud Deployment

Docker

Product Thinking

WORK EXPERIENCE

NomadEire Oct 2025 - Present

Software Engineer (Sole Engineer + Product Owner)

- Owned NomadOps entirely -- decided what to build, how to build it, and when to ship it. No product manager. No escalation path. Real product decisions, real consequences.
- Built the complete stack: **TypeScript React** frontend, **Node.js** REST API backend, **PostgreSQL** data layer, and **AWS** infrastructure (EC2, S3, RDS, API Gateway).
- Pushed back on scope that didn't serve users; shipped fewer features, better. Deployed async-first with documentation-driven communication and minimal meetings.

Advice Bytes May - Aug 2025

AI Developer Intern

- Independently defined requirements, built, and deployed a production AI chatbot in three weeks -- reduced inbound support by **30%** and achieved **87% GDPR accuracy**.
- Built with **Python**, **Node.js**, **Supabase (PostgreSQL)**, and AWS Lambda -- full-stack ownership from API design to database schema to production deployment.

Accenture Oct 2023 - Aug 2024

Packaged App Developer

- Delivered enterprise backend features in **Java Spring Boot** within Agile teams, applying rigorous code review, testing practices, and delivery discipline at scale.
- Learned to navigate large codebases, work in cross-functional teams, and ship production code that other engineers depend on.

KEY PROJECTS

NomadOps FULL PRODUCT OWNERSHIP

Complete full-stack product: TypeScript React frontend, Node.js REST API, PostgreSQL with carefully designed schema for target access patterns, and AWS production deployment. Built solo with async-first delivery and genuine product decision ownership.
Stack: TypeScript, React, Node.js, PostgreSQL, AWS

Venturella SUB-200MS POSTGRESQL

Full payment platform with sub-200ms PostgreSQL query performance under production load -- achieved through EXPLAIN ANALYZE optimisation, targeted indexing, and schema design aligned to payment data access patterns. Full-stack: React, Node.js, Stripe integration.
Stack: TypeScript, React, Node.js, PostgreSQL, Stripe

Sentinel-AI 84% ACCURACY · MICROSERVICES

Multi-agent pipeline with microservices architecture, Docker Compose orchestration, and PostgreSQL state management. Demonstrates clean architecture and scaling principles applied to a production AI system.
Stack: Python, FastAPI, Docker, PostgreSQL, Claude API

EDUCATION

MSc Computer Science	2024-2025
University College Dublin (UCD), Ireland	
Grade: 2:1	
BTech Computer Science	2019-2023
Graphic Era University, India	
Grade: 9.2/10 (First Class Honours)
